Su 93 ANTIQUE SURVEY COMPASS & TRIPOD by Wm. L. Potts, PittsTown, New Jersey, 5½" dia. face, Vanes 6½" high. Brass, with needle and needle lock, cross bubbles working, crack in glass face (which could be replaced). In wood box and mounted on its original antique tripod. Similar to one shown in "The Makers of Surveying Instruments in America" by Charles Smart. He states "This is the second surveyor's vernier compass made by W.L. Potts that is known to exist." With this one there are now at least 3 known. This is probably the same man who produced instruments with Rittenhouse in Pennsylvania and there are "Rittenhouse and Potts" compasses known with photographs of them in the Gurley Museum. A rare find in American instruments.

\$800

Mi547 MICROSCOPE by Ernst Leitz, Wetzlar. This is the finest working microscope we have offered. Horseshoe Base, Mirror, Shutter. Holder adjustable in two directions on stage. Mounts three lenses with one an oil immersion lens. Rack with course adjustment and micrometer adjustment. In beautiful condition with original lacquer on brass tube and fittings. Base is painted black. With carrying case and extra parts. A good old working microscope for the medical student today.
